SUMMARY

Aspiring Data Scientist with strong hands-on experience in Machine Learning and Deep Learning, including real-world projects in NLP, computer vision, and predictive modeling. Skilled in building end-to-end ML pipelines, from data preprocessing to model evaluation. Recently completed Deep Learning and transitioning towards Generative AI, with a focus on building intelligent, real-world solutions.

TECHNICAL SKILLS

Programming: Python, C++, Java

Machine Learning: Scikit-learn, Supervised & Unsupervised Learning, Feature Engineering, Model Evaluation
Deep Learning: CNN, RNN, LSTM, TensorFlow, PyTorch
NLP: Text Preprocessing, TF-IDF, Sentiment Analysis, Sequence Modeling
Libraries: NumPy, Pandas, Matplotlib, Seaborn
Tools: VS Code, Jupyter Notebook, Google Colab, Git & GitHub

WORK EXPERIENCE

Arch Technologies | AI/ML Engineer Intern |

- Applied machine learning algorithms to real-world datasets, improving data preprocessing pipeline efficiency and model readiness.
- Performed exploratory data analysis (EDA) on structured datasets to extract actionable insights for model optimization.
- Assisted in development and evaluation of classification and regression models, contributing to iterative model improvement.
- Collaborated in an agile team environment, translating business problems into data-driven solutions following industry best practices.

PROJECTS

Twitter Sentiment Analysis — NLP / Classification

- Built an NLP pipeline to classify tweet sentiment (positive/negative/neutral) using text preprocessing, tokenization, and TF-IDF feature extraction.
- Tech stack: Python, NLTK, Scikit-learn, Pandas, Matplotlib

Plant Disease Detection— Deep Learning (CNN)

- Developed CNN-based image classification model for plant disease detection .Trained on labeled image dataset and optimized performance
- Tech stack: Python, Tensorflow, CNN

Car Price Prediction — Regression

- Built regression model to estimate car prices based on multiple features, Achieved -89% model performance (R“ score)
- Tech Stack: Python, Scikit-learn

Book Recommendation System — Binary Classification

- Designed a recommendation engine using collaborative filtering, Achieved -87% relevance accuracy based on user interaction data
- Tech Stack: Python, Pandas, NumPy

EDUCATION

BE Software Engineering
Mehran University of Engineering & Technology, SZAB
Campus 2024 —2028 (Expected)
Current Status: 4th Semester (in progress)
